Magnetic - Research Vessel

The vessel Magnetic has been transformed into a research vessel to provide a platform for marine biologists conducting research on the Great Barrier Reef. The large open areas available on board (420m²), allows for a variety of specialised modules to be craned on and off the vessel as per the research requirements. This approach gives scientists flexibility based on their research requirements. The vessel can accommodate 16 people (including 4 crew) for overnight stays with full catering.

The vessel is available for charters. All enquiries can be directed to Angus Campbell (0417 079 738) or Peter Batri (0407 747 276).
